

#1 SOIL RECIPE PLANTING PACKAGE

Covers 100 sq. ft.

- Three 2-cu. ft. bags **Cotton Boll Compost** \$17.94
 - 4 lbs. **Hi-Yield Bone Meal** 4.98
 - 4 lbs. **ferti•lome Gardener's Special** 5.98
 - 40 lbs. **Gypsum**..... 7.98
 - 1 lb. **Weed and Grass Stopper** 4.98
- ~~\$41.86~~

\$36⁹⁸
SAVE \$4.88!

To improve the health and condition of your soil before spring planting, add the first four amendments to your soil. Mix in well with a tiller or a garden shovel to about 8-12" deep. Deeper is OK, but not always practical in heavy clay soils.

Never till or work up your soil when it is too wet. You'll create hard clods that may be difficult to break up. Be patient. Wait until the soil has dried to a crumbly consistency.

After planting, sprinkle Weed and Grass Stopper on top of the soil and around your plants to prevent annual weeds (such as crabgrass) from germinating.

The following is a list of Soil Recipe ingredients and the benefits each provides for your soil and your plants:

COTTON BOLL COMPOST

100% organic compost that improves poor soil immediately by restoring vital organic matter and humus. It increases moisture-holding capacity of sandy soils and is unsurpassed at breaking up clay soils. Cotton Boll Compost is acidified and adds beneficial microorganisms to the soil.

HI-YIELD BONE MEAL (0-10-0)

Provides a slow release form of natural phosphorus to help plants produce sturdy root systems, hasten maturity and stimulate plant growth.

FERTI•LOME GARDENER'S SPECIAL (11-15-11)

An excellent all-purpose plant food that contains both fast and slow release nitrogen. It provides a generous supply of plant nutrients needed for healthy growth and contains necessary trace elements to aid in development of plant and crop yield.

GYPSUM

Supplies essential nutrients of calcium and sulfur, replacing the sodium of alkaline soils with calcium to improve drainage and aeration. Gypsum helps change soil structure, allowing air and water to circulate through the soil, improving plant growth and vigor.

WEED AND GRASS STOPPER

Provides pre-emergent weed and grass control in flower beds, around trees, shrubs and certain vegetables. Provides excellent control when applied prior to mulching planting bed areas.
