

Caring for your Tadpole

1. Keep tadpole in the plastic bag with pond water until you get home.
2. Find a suitable home for your tadpole: water garden, bucket, aquarium.
3. If you use tap water for the tadpole's new home, let water sit for 2-3 days before adding the tadpole. If you want to put the tadpole in sooner add "Fresh Start." It quickly removes chlorine and heavy metals from tap water making it suitable for tadpoles (frogs) and fish.
4. When adding the tadpole to the water you'll do so by gently floating the plastic bag with the tadpole in it into the water. After an hour you can "release" the tadpole into its new home.
5. Feed your tadpole flaky fish food or it can eat off water plants.

These are 2nd year tadpoles so they will be turn into frogs this year!
